GRADE AC137

CARBON BRUSHES FOR TRACTION MOTORS

AC137, MERSEN'S RELIABLE SOLUTION

Mersen is a world leader in the manufacturing of carbon brushes for all types of motors and generators.

After extensive years of experience, grade AC137 has been developed specifically for railway and transit traction motors. Today **AC137 is used worldwide and provides a good technical and economical performance.**

TAILORED BRUSH FEATURES

Mersen can supply you with carbon brushes of various designs, including shapes, components and sizes, with a high quality of manufacturing, in particular cable connection by tamping.

When required, **we could adjust the design** (grade, cable, top pad, wafer size...) **to adapt the carbon brush specifically to your DC motor for its application.**

MERSEN PROPERTY

AC137 advantages:

- ▶ **Impregnated grade for higher mechanical strength**
 - Good operation in severe conditions
 - Low wear rate
 - Consistent brush life
- ▶ **Good commutation** over a wide range of speeds and environmental conditions
 - Consistent commutating performance
 - No flashovers or other damaging events

With good commutation ability, no abrasiveness, and special impregnation, the grade **does not attack the commutator:**

- Longer maintenance periods between rectifications
- Longer commutator life

GRADE SPECIFICATION

PHYSICAL CHARACTERISTICS according to IEC 60413:1972		
Classification	ELECTROGRAPHITE	
Metal content	0%	
Resistivity	5,100 / 0.002	$\mu\Omega.cm / \Omega.in$
Flexural strength	41 / 5,800	MPa / PSI
Shore hardness	80	-
Bulk density	1.72	-

RECOMMENDED RUNNING CONDITIONS		
Current density	8 – 12 / 52 - 77	A/cm ² / A/in ²
Peripheral speed	<50 / <10,000	m/s / ft/min
Pressure	Depending on application	

Contact us to request our complete technical data sheets as well as our safety data sheets.

A WORLD-RENOWNED GRADE

Operational properties can be optimized by enhancing the **mechanical stability** (shape, components, friction coefficient) **and electrical performances** (voltage drop at contact, commutation ability, load capacity), **reducing the sensitivity to environmental condition** (protecting / polishing / lubricating action on the commutator skin), etc. The function of a good brush is further explained in our technical data sheet reference TDS-01.

MERSEN SERVICES

Mersen, as a reference supplier of electric motor manufacturers, also offers **dedicated services of refurbishment, replacement of brushes and brush-holders, re-engineering and trainings.**

**A COMPREHENSIVE OFFER
FOR THE RELIABILITY OF YOUR FLEET**

Brushes - Brush-holders - Solutions of lubrication
Pantograph contact strips - CCD shoes - Services

IN SITU MAINTENANCE SERVICES

**TOOLS AND DIAGNOSTIC DEVICES
TRAINING & TECHNICAL SEMINARS**

The specifications or data contained in the present document are only given for information and do not create any undertakings whatsoever. Any copy, reproduction or translation, either partially or fully, of this information is subject to the Mersen's prior written consent. In addition, due to the continuing improvement of techniques and change of applicable standards, Mersen is entitled to modify at any time the characteristics and specifications of its products as described in the present document.

Mersen products have been designed, manufactured and tested by Mersen for a range of specific industrial application to be operated depending on particular specification and climatic conditions.

BEFORE ordering, please contact Mersen. In order to ensure that the product is adequate and fits with your need you should contact/provide Mersen with all relevant technical specifications and climatic conditions. MERSEN makes no representation or/and warranty, and waives any liability, either express or implied for products' reliability and lifetime performance in case Mersen has not been provided with customers specifications or if the products are not purchased directly from MERSEN or its distributors and/or agents.
